

Confluence Access

Confluence is a web-based wiki used by CBA to manage and organise documentation such as project plans, meeting notes and more. It allows the iOS engineering team to work on documents at the same time and share information with each other. Confluence is organised into spaces, which are groups of related pages. There is an iOS Engineering space for the team to use.

There are three types of permissions in Confluence:

- Global: these affect what a user can do across the whole site.
 - Can use: enables users to access Confluence
 - Personal space: allows users to make their own private space
 - Create space(s): allows users to make other spaces
 - Confluence administrator: allows the user to make basic changes such as adding users and setting the colour scheme
 - System administrator: allows complete control over the whole site.
- Space: these change what a user can do in a specific space.
 - Add page
 - Delete page
 - Comment
 - Set restrictions: allows users to show or hide pages from other users
 - Export space: allows users to save the entire contents of the space to PDF or other file formats.
- Page restrictions.
 - All pages are open to editing and viewing by default, but they can be restricted if necessary.
 - We will not be considering these in this task.

These are the people who need access to the iOS Engineering space:

- Product team: responsible for requirements gathering and setting out what the iOS app will need to do.
- Lead Mobile Engineer: manages the engineering team and allocates work to the engineers.
- Senior developers: tackle the more complex aspects of development and mentor the junior developers.
- Junior developers: tackle less-complex features.
- QA team: test that the app works and meets the requirements set out by the product team.
