Lead Mobile Engineer	Green	Green	Red	Green	Red	Green	Green	Green	Green	Red
Senior developers	Green	Green	Red	Red	Red	Green	Green	Green	Red	Red
Junior developers	Green	Green	Red	Red	Red	Green	Red	Green	Red	Red
QA team	Green	Green	Red	Red	Red	Green	Green	Green	Red	Red

Product team: responsible for requirements gathering and setting out what the iOS app will need to do.

Lead Mobile Engineer: manages the engineering team and allocates work to the engineers.

Senior developers: tackle the more complex aspects of development and mentor the junior developers.

Junior developers: tackle less-complex features.

QA team: test that the app works and meets the requirements set out by the product team.

---

[1] No one needs the ability to create a space as the iOS team already has a space to work in. If a new team is set up then someone more senior in CBA would have the permission to set up a new space.

[2] The Lead Mobile Engineer should have the freedom to customise the iOS space.

[3] No one here needs the ability to control the entire Confluence site. This would be someone more senior, like the Head of Engineering.

[4] As the junior developers are less experienced, we have disabled this permission just to be safe.

[5] There might be a time—when a new feature is being planned for instance—when these two groups might want to restrict information until it is ready.

[6] There shouldn't be a need to export the space. Removing this permission means we can be more confident that our information is secure.
